Authorization for this examiner's amendment was given in a telephone interview with patent attorney Kevin Shaw on September 1, 2005.

The application has been amended as follows:

At the end of the same paragraph, "system is 100 first provided" is hereby replaced by **"system 100 is first provided"**.

In line 29 of page 8, "Customer Segmentation Module 400" is hereby replaced by **"Customer Segmentation Module 400"**.

Claims 34-38 are hereby cancelled without prejudice or disclaimer.

Allowable Subject Matter

Claims 1 and 7-14 are allowed.

Claims 25-33 are allowed.

The following is an examiner's statement of reasons for allowance: The closest prior art of record, Cunningham et al. (U.S. Patent 6,029,139), discloses a method for evaluating a promotion scheme for a product, the method comprising the steps of: using a computer, which must therefore have been provided (e.g., column 1, line 64, through

Art Unit: 3625

column 2, line 7); collecting market data to create a model of a market for the product, wherein said market model identifies at least one competing good, and customer segments are defined for said product and competing goods (column 1, lines 19-27; column 6, lines 32, through column 8, line 64); collecting historical transaction data related to the product and competing goods in the market (column 4, line 62, through column 5, line 10; column 11, lines 42-54); analyzing the historical data and the model to determine a utility of the product without the promotion scheme (column 12, lines 26-35); and estimating a change in utility of the product from the promotion scheme (column 12, lines 44-51). Multiplicative and attractive models are known, and have their reported advantages with respect to each other (Naert and Weverbergh, "On the Predictive Power of Market Share Attraction Models"; Brodie and de Kluyver, "Attraction Versus Linear and Multiplicative Market Share Models: An Empirical Evaluation"). However, neither Cunningham nor any other prior art of record discloses or suggests a computer or a person analyzing historical data; determining on the basis of the historical data whether (a) the historical transaction data satisfies a predefined completeness criterion, (b) sales of the product and sales of the competing goods are statistically dependent, (c) sales of the product and sales of the competing goods during a first time period are statistically dependent on sales of the product and the competing good during the second time period, or (d) a number of the product and the competing goods exceeds a predefined number criterion; and selecting a multiplicative model when at least one of (a)-(d) is met; otherwise selecting an attractive model. Determining whether a predefined number or completeness criterion is met, or whether data sets are

statistically dependent, is of course known, but not using the determination in the manner recited.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Blume et al. (U.S. Patent 6,839,682) disclose predictive modeling of consumer financial behavior using supervised segmentation and nearest-neighbor matching.
